Section 2 total:	
Section 3 total:	
Section 4 total:	
FINAL SCORE	

If you scored 46 or more, you have a high probability of a tick-borne disorder.

If you scored between 21 and 45, you possibly have a tick-borne disorder and should see a health-care provider for further evaluation.

If you scored under 21, you are not likely to have a tick-borne disorder.

Interpreting the Results

We see a high frequency of Section 1 symptoms in our patients, including fatigue, joint and muscle pain that often migrates, sleep disorders, as well as memory and concentration problems, and a high frequency of Section 3 symptoms, especially neuropathic pain that comes and goes and migrates (tingling, numbness, burning, etc.). These form a cluster of presenting symptoms that are characteristic of those with a high probability of having Lyme-MSIDS (Multiple Systemic Infectious Disease Syndrome Information).

ACTION PLAN.

You have completed step 1 in your journey to identify what is causing your health problems. It is a simple questionnaire but it is a hugely important step and is where all of our clients with complex health issues start.

The next stage is to fill out a co-infections questionnaire. There are a host of bacteria and viruses that can cause many of the symptoms that you have ticked above. These need to be identified to help narrow down the list of what we need to include in a test profile.

TESTING

With all of the information, we can proceed to testing. We use the leading labs in the world to blood test the presence of Lyme and co-infections.
